Worcester, Mass."

Vol. 2

OCTOBER-NOVEMBER, 1921

Nos. 10 and 11

PLANS FOR THE TORONTO MEETING

Nearly a year ago Sir Frederick Stupart, Director of the Dominion Meteorological Service, extended the following cordial invitation to the American Meteorological Society:

"I understand that the American Meteorological Society is to meet in Toronto during Christmas week, 1921. In behalf of the Meteorological Service, I would assure you that it will give myself and my chief assistants pleasure to do what we can to make the visit pleasant for those members who attend and the Meteorological Office will be open for inspection, and so far as possible for the use of the visiting members."

The Royal Canadian Institute also extended to the Society "a very hearty invitation to visit Toronto next December."

The general plan for the Toronto meeting, which is the 6th one of the Society, is as follows:

Wednesday, Dec. 28: Morning session for presentation of various papers, especially on agricultural meteorology and climatology. Afternoon session for a symposium on, "Improvements in synoptic weather charts, especially on the reduction of atmospheric pressure observations."

Thursday, Dec. 29: Morning session for the annual meeting, followed by the address of the President, Professor R. DeC. Ward, on, "Tendencies and progress in climatology during the past decade." Afternoon session for presentation of miscellaneous papers.

Should the number of papers to be presented demand it, there will be another session on the afternoon of Tuesday, Dec. 27. There will be a meteorological luncheon Dec. 28. The detailed program will be published in the December Bulletin. Fellows and members of the Society are invited to attend and to present papers and take part in the discussions. Titles and abstracts should be sent to the Secretary at once.

THE HOT SUMMER OF 1921 IN THE EASTERN UNITED STATES

1921 will long be noted for its very hot summer. We do not know how much of the world was unusually hot in that season, but we have reports of periods of extraordinary heat in western and central Europe, and many of us experienced the long series of unusually hot days in eastern North America. Professor A. J. Henry has discussed in the
