Certified Consulting Meteorologist: The certification program of the American Meteorological Society is aimed at fostering the establishment and maintenance of a high level of professional competency, and mature and ethical counsel, in the fields of consulting meteorology. Requirements of knowledge, experience, and character are determined by a five-man Board. Objectives of the program and application procedures are described in full detail in the August BULLETIN (pp. 1203–1205).

478 Vol. 63, No. 4, April 1982
CAUSES OF CLIMATIC CHANGE

METEOROLOGICAL MONOGRAPHS, Volume 8, Number 30

Price: $20 nonmembers
$8 AMS members
(add $2.00 postage and handling)

160 pages (clothbound)

Covering the broad areas of climatic determinism, atmosphere-ocean-ice cap dynamics, and astronomical factors in climatic change, the monograph presents an equitably balanced and logically progressive overview of the problem of climatic change. It highlights the significant shift in recent years from the earlier and relatively passive role played by the climatologist in paleoscientific research, involving reconstructions of climatic history from veritable floods of information from other disciplines, to one in which basic patterns of planetary circulation and climate consistent with a specific matrix of conditions at the earth’s surface can be determined through numerical modeling experiments. That there still remain many questions and conflicts, however, in the ultimate reconstruction is quite apparent from the many climate-regulating theories which are presented. These include ocean properties and currents, volcanic activity, continental drift, earth-orbital relationships, CO₂ content, solar output and cosmic debris, among others.

CAUSES OF CLIMATIC CHANGE, a major contribution to paleoclimatology, will prove to be an indispensable reference, not only to the specialist, but to a broad and interdisciplinary spectrum of scientists and students alike in such relevant fields as meteorology and climatology, physical and chemical oceanography, tectonics, volcanology, geochemistry and solar physics.

Published by special arrangement between the American Meteorological Society and the U.S. National Committee of the International Union for Quaternary Research (INQUA) as Volume 8, Number 30 of Meteorological Monographs and as Volume 5 of the Proceedings of the Seventh Congress of INQUA. Organized as part of the Seventh Congress of INQUA in Boulder, Colorado, August 1965, and cosponsored with INQUA by the National Center for Atmospheric Research.

Edited by J. Murray Mitchell, Jr., NOAA
