The Best Solution for Ground Truthing Spectral Radiation Measurements...

EKO MS-700 series yields accurate VIS to NIR spectral radiation measurements with easy operation. Suitable for various satellite-based spectral measurement applications, such as vegetation index determination and calibration of remote-sensing data.

Series of Spectroradiometers

- Grating Spectroradiometers from VIS to NIR with weatherproof feature
MS-710: 350-1050nm, 5nm resolution
MS-712: 900-1700nm, 7nm resolution
- NIST traceable calibration

- Portable spectroradiometer for field research with 350-1050nm wavelength range
- Stand-alone instruments operated by 4 x AA battery
- PC interface to download and analyze data
- Selectable aperture angle

EKO also provides climate monitoring radiation sensors.

- Pyranometer
- Pyrheliometer
- UV radiometer
- Pyrgeometer
- Sun Tracker

A NAME YOU CAN TRUST AT A PRICE YOU CAN AFFORD

Belfort has applied its proven experience with visibility technology in designing this new sensor for applications which require high accuracy over an extended range of visibility (20 ft. - 50 miles/6 m. - 80 km.). Digital RS232 output at 300 -38,400 Baud can be used to indicate the present visibility, provide diagnostic information, and provide access to

configuration and calibration options. Applications include synoptic stations, lighthouses, highways, resort areas, as well as shipboard and other marine platforms. These sensors provide accuracy and reliability as a cost effective alternative to more expensive models and brands. Contact Belfort today for more information.
