

## Editorial on Reviewers

The quality of the articles appearing in the *Journal of Applied Meteorology* is heavily dependent on the voluntary reviews by hundreds of dedicated scientists. The editors of JAM appreciate this effort and we hope the authors and entire membership of the Society recognize the time and effort given freely to improving many papers and to sustaining the quality of this JOURNAL.

In an effort to partially recognize these contributions, we have listed on the back side the names of those who were solicited and returned reviews of one or more papers for JAM during 1978. We hope our system has not erroneously omitted anyone and beg your indulgence if your name is omitted.

Those people listed with an asterisk indicate reviewers who performed outstanding reviews, both in quality and quantity. Their reviews were often found very useful to authors for improving the quality of papers.
