

## EDITORIAL

The January 1989 issue of the *Journal of Applied Meteorology* (formerly the *Journal of Climate and Applied Meteorology*) will be dedicated to the memory of the late Abraham Gagin. Authors interested in having an article published in this memorial issue should so indicate when submitting their manuscripts for publication to the Chief Editor, Dr. Bernard A. Silverman. Articles dealing with Abraham Gagin's major research interests such as nucleation, cloud physics, natural and modified precipitation processes, and precipitation enhancement concepts, experiments and technology, are most appropriate. Manuscripts that are accepted for publication by 1 August 1988, are eligible for publication in the memorial issue. Therefore, in order to satisfy the normal reviewer process, manuscripts should be submitted no later than early in 1988. Because there is a limit to the size of any journal issue, the number of papers that will appear in this issue may have to be limited. Accordingly, the guest editor, Dr. Arnett S. Dennis, will select from the eligible papers those which in his judgment best represent the intellectual legacy left by Abraham Gagin to atmospheric science. Papers not selected will appear in earlier or subsequent issues.

*Bernard A. Silverman*  
Chief Editor, Applied Meteorology
