(Manuscript received 5 May 2021, in final form 20 May 2021)

---

Figure 15 in Ito et al. (2019) did not include two panels, Figs. 15d and 15e, that were mentioned in the text and caption, and labels indicating points A, B, and C in Fig. 15c were not properly placed. The corrected figure is presented here. The errors do not affect the results and discussion.

We regret that these mistakes occurred during the preparation of the final typescript and were overlooked through proofreading. The authors apologize for any inconvenience.

*Acknowledgments.* Authors thank Professor Yukitaka Ohashi for pointing out the mistake.

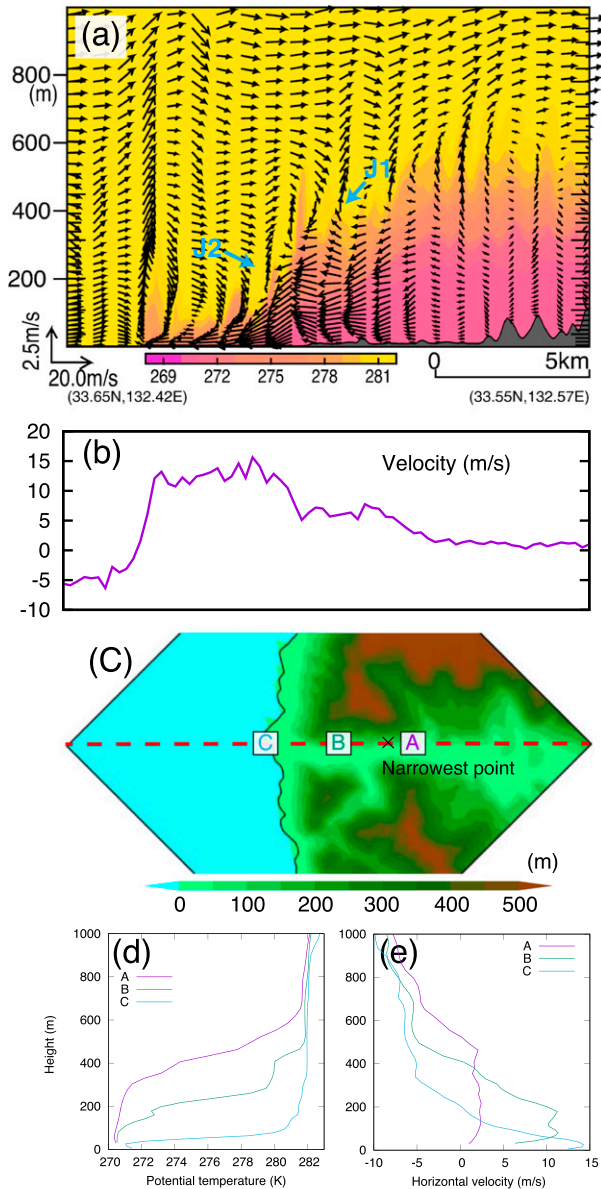

FIG. 15. (a) Potential temperature (shading) and wind vectors and (b) horizontal wind velocity at 10 m AGL (positive to the left) along the red dotted line shown in (c) a plot of the valley of interest, in which the topography is shown by shading. The locations of two jumps are indicated as J1 and J2 in (a). The narrowest point in the valley is marked by the cross in (c). Also shown are vertical profiles of (d) potential temperature and (e) horizontal velocity at points A, B, and C in (c).
