Because of a production error, the figure published as Fig. 7 in Chen et al. (2017) is actually identical to Fig. 8 and is therefore incorrect. The correct Fig. 7 is provided herein.

The staff of the Journal of the Atmospheric Sciences regrets any inconvenience this error may have caused.

REFERENCE

FIG. 7. (a) Cross section of mean wind vectors (streamlines) and onshore wind (color shadings); cross sections of perturbation wind vectors (streamlines) and onshore wind (color shadings) at (b) 0000, (c) 0300, (d) 0600, (e) 0900, (f) 1200, (g) 1500, (h) 1800, and (i) 2100 LST from the HiWind100 experiment. All cross sections are along the long axis of the blue box in Fig. 1 and averaged along the short axis of this box. The highest topographic profilers along the long axis of the blue box in Fig. 1 are shown by the black shading. Positive perturbation temperature is shown by the solid red contours (that start from +1 K and have a 0.5-K interval), and negative ones are shown by the solid blue contours (that start from −1 K and have a −0.5-K interval).
