et Lutte contre les changements climatiques, Quebec City, Quebec, Canada*

---

Because of a production error, two mathematical mistakes appear in Fortin et al. (2014). The first occurs just above Eq. (11) on p. 1710. That sentence should read: “Hence, over a finite number of cases  $T$ ,  $R^{-1} \sum_{i=1}^R \text{MSE}^{(i)}$  can be compared to  $R(R-1)^{-1} T^{-1} \sum_{t=1}^T s_t^2$  in order to assess the reliability of an EPS:

$$\frac{1}{R} \sum_{i=1}^R \text{MSE}^{(i)} \approx \left( \frac{R}{R-1} \right) \frac{1}{T} \sum_{t=1}^T s_t^2. \quad (11)''$$

The second error appears on the same page, three lines above Eq. (12). That full sentence should read: “Indeed,  $\bar{X}_t - y_t = R^{-1} \sum_{i=1}^R X_{t,i} - y_t$  is a weighted sum from  $\mathbf{z}_t$ , with weights given by  $\mathbf{w} = \{-1, R^{-1}, \dots, R^{-1}\}$ .”

The staff of the *Journal of Hydrometeorology* regrets any inconvenience these errors may have caused.
