

CORRIGENDUM

Several author corrections were inadvertently overlooked during proof editing of the note, "On the Formation of Potential-Vorticity Anomalies in Upper-Level Jet-Front Systems" by Daniel Keyser and Richard Rotunno, that appeared on pages 1914–1921 of the September *Monthly Weather Review*, Vol. 118, No. 9. The omitted corrections are as follows.

Page 1914, footnote 1: In the last sentence add "transport" after the word, "turbulent".

Page 1918, eight lines below Eq. (6): Add a superior 6 after the word "invariant." as citation to footnote 6.

Page 1919, first paragraph, last sentence: Change "their restrictions" to "these restrictions."

Page 1919, second paragraph, first sentence: Change to read

"It would appear that of the two alternatives discussed here Shapiro's is the only practical option for dynamical studies because observing/analysis systems yield averages of velocity and temperature rather than point values of the gradients of these respective quantities."
