Correction Notice

Vol. 91, Nos. 10-12, p. 637: The sentences beginning at bottom of column 1 should read: "In all figures the Q curve is a plot of increments of pressure corrected optical depth, in centimeters of precipitable water vapor, between successive pressure intervals. This plotted curve utilizes the numerical values of the radiation scale. It is interesting to see the optical depth increments decrease through the cloud, from 570 through 490 mb. in this example."

Figures 2 through 6 on pages 637-639: "mixing ratio Q" should be changed to "optical depth Q."
