

Weather and Forecasting

WEATHER AND FORECASTING (*WAF*) publishes research that is relevant to operational forecasting. This includes papers on significant weather events, forecasting techniques, forecast verification, model parameterizations, data assimilation, model ensembles, statistical postprocessing techniques, the transfer of research results to the forecasting community, and the societal use and value of forecasts. The scope of *WAF* includes research relevant to forecast lead times ranging from short-term “nowcasts” through seasonal time scales out to approximately two years.
