FIG. S1. Regression of the monthly-mean SSTA (shading, °C) and SLPA (black contour, hPa) onto the standardized monthly-mean EC-1 winds for each individual model. Contour interval 0.1°C for SSTA and 0.4 hPa for SLPA. Positive (negative) values of SLPA denoted by solid (dashed) contours; zero contour omitted.
FIG. S2. As in Fig. 10 but for the condition that the NPMM_{FMA} and SPMM_{FMA} indices are of the same sign.
