Supplemental Material for:

Vapor-Buoyancy Feedback in an Idealized GCM

Seth Seidel and Da Yang

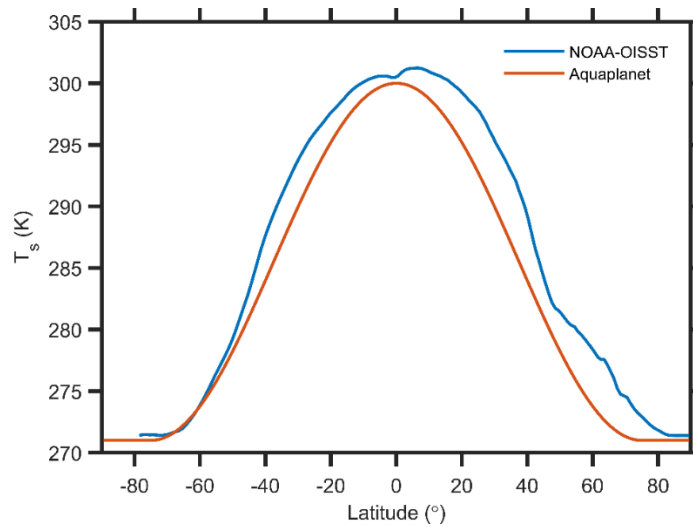

Figure S1. Prescribed surface temperature for the 300 K simulations, with zonal-average sea surface temperature data from the NOAA-OISST data set for comparison (Huang et al. 2021).

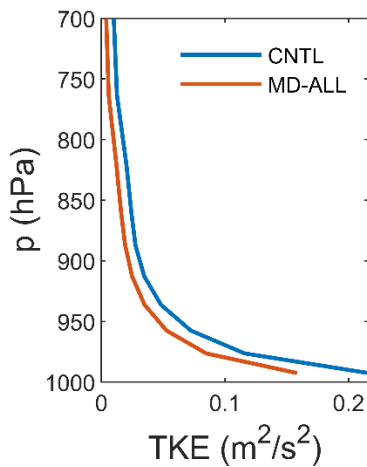

Figure S2. Equatorial-average ($\pm 5^\circ$) turbulent kinetic energy within the CAM6 boundary-layer scheme.

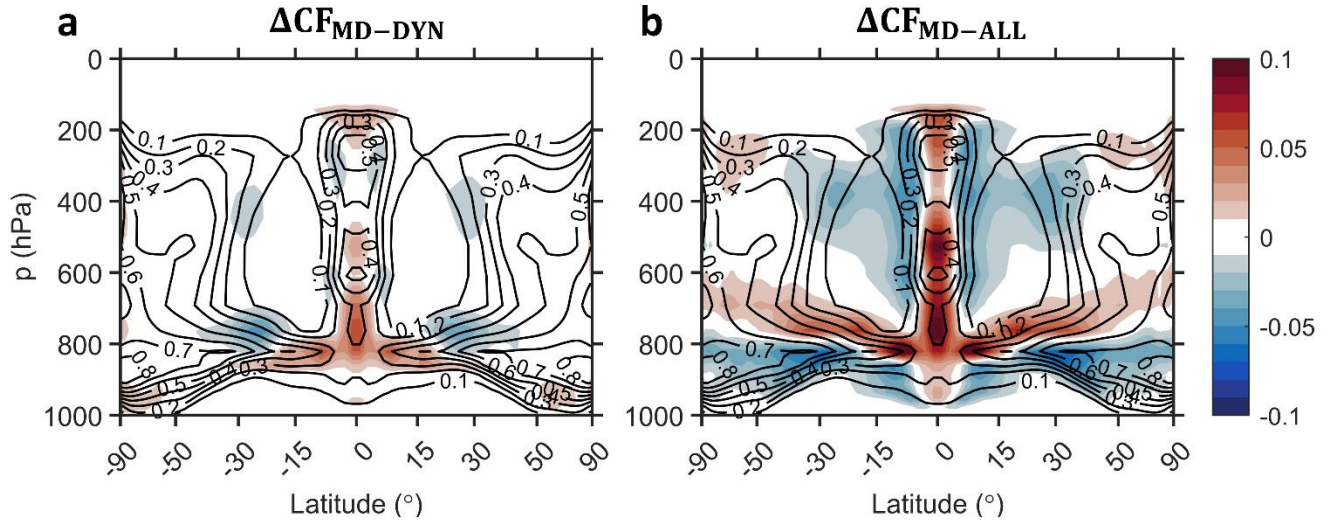

Figure S3. Simulated differences in cloud fraction between the CNTL simulation and (a) the MD-DYN simulation, and (b) the MD-ALL simulation for equatorial surface temperature 300 K. Black contours are the cloud fraction in the CNTL simulation.
